Une nouvelle distribution de [Bigloo](#) pour Windows vient de sortir, j'en emprunte l'annonce à l'auteur du portage, [Yannis BRES](#) :

Dear Bigloo Windows users,

I'm glad to announce that Bigloo 2.7a (Build 1) for Windows is finally available at <http://www.yannis.bres.name/Bigloo>.

This alternative distribution of Bigloo is ready to be used and packaged in a standard Windows Installer. In particular, applications generated for the C backend do not depend on the Cygwin C runtime as does the regular Bigloo distribution.

Best regards and happy parens,
Yannis

Changes from 2.6e build 2 :

Code synchronization with Bigloo 2.7a final

(os-tmp) (and other functions) now correctly expands environment variables read from the Registry.

Posix thread abstraction layer is now provided by pthreads-win32.

Installer : The Bee is now installable and can be automatically registered into your .emacs file.

Uninstaller : .NET runtime DLLs are now removed from the GAC
